

Adler and Allan  
Ports and Harbours

# Marine Response Capability Statement

**The Adler and Allan Group  
is the UK market leader in the  
provision of counter pollution  
services to ports, harbours  
and marine installations.**

The success of our marine response service is based upon three factors:

- **People you can trust**
- **The right equipment**
- **The complete package**

No counter pollution service within the marine environment would be complete without the added value services of seamless escalation, hazardous and noxious substance response (HNS), consultancy services, training and compliant waste management; these services are available to Adler and Allan's subscribers.

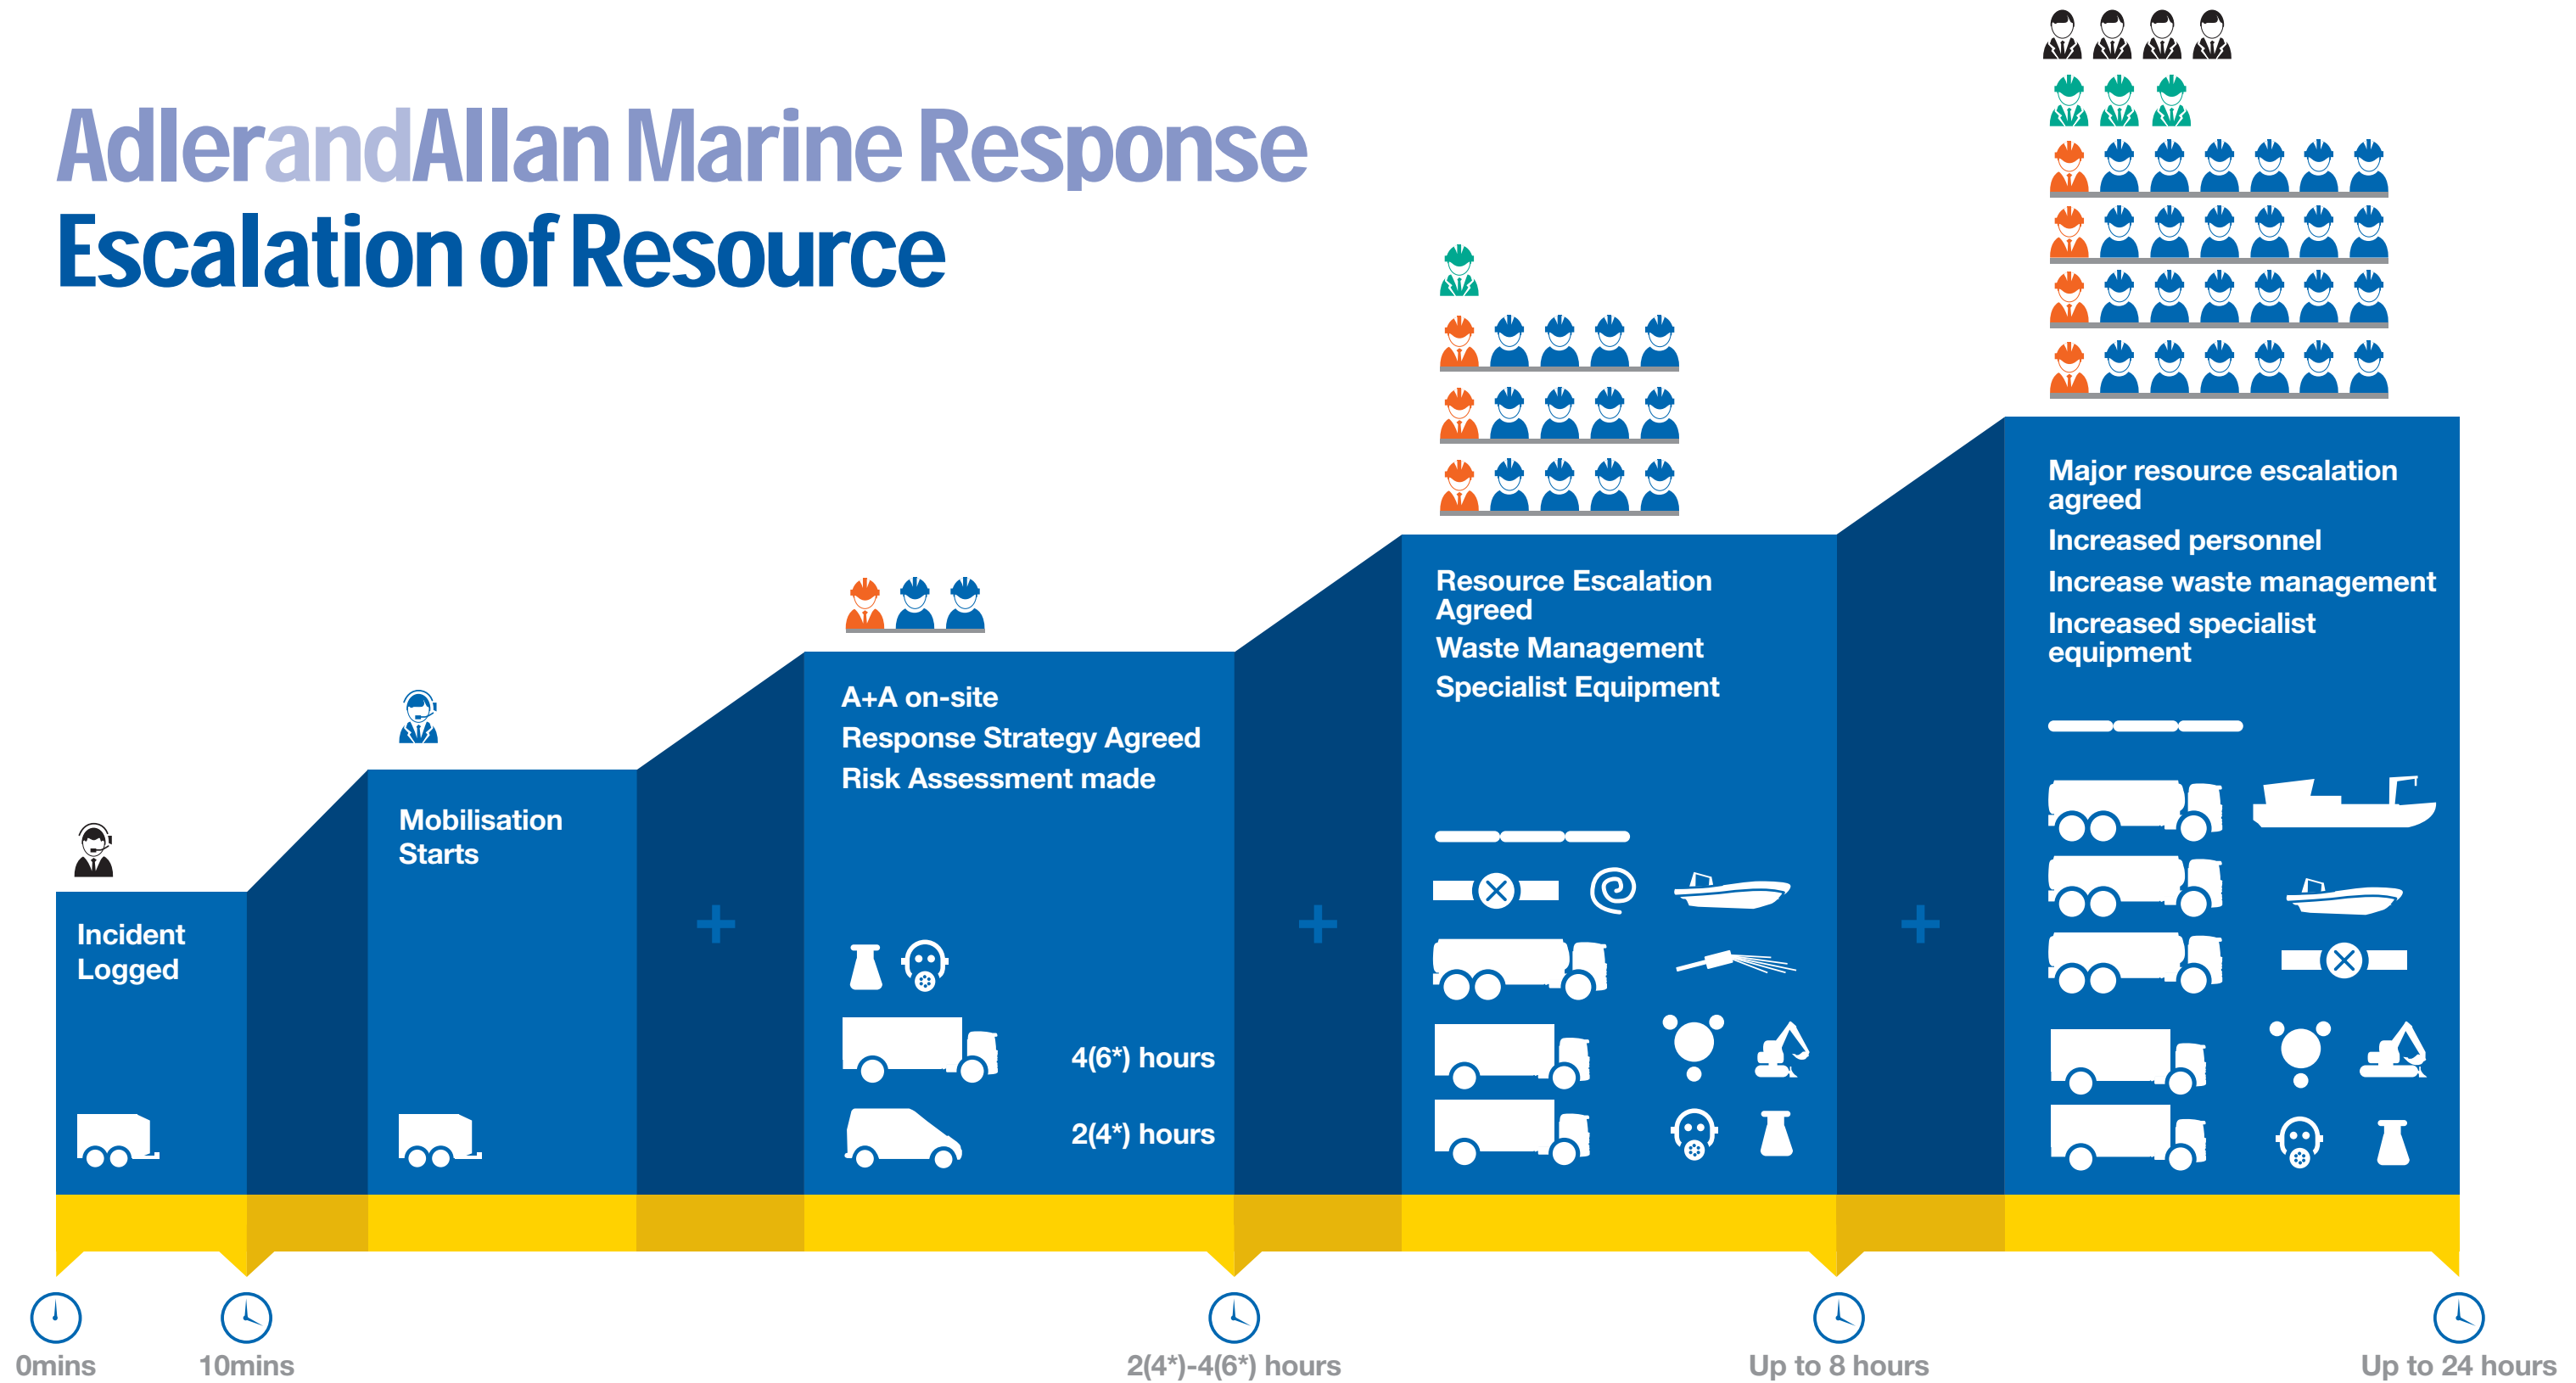

24 Hour Emergency Response

- Heavy Skimmer
- Vacuum Tanker
- Containment Booms
- Heavy Plant
- Sampling and Analysis
- Beach Cleaning
- Hazardous and Noxious Substances

\*Numbers in brackets are response times outside normal working hours

### HNS Response

Adler and Allan's HNS strike team is a specialised response service that gives callers immediate 24/7 access to our Duty Managers and Incident Advisors who are trained to provide advice and safe recovery solutions to emergency situations involving hazardous materials.

On-site HNS response is mobilised by personnel and assets from our central UK depot at Droitwich, where our experienced chemical response supervisors lead responders utilising equipment such as breathing apparatus, total encapsulation suits and chemically resistant recovery and transfer systems through safe systems of work and ultimately thorough effective decontamination.

The Adler and Allan HNS response service is activated through our national response number **0800 592 827**

### Consultancy

Adler and Allan offer effective and flexible consultancy services through our team of environmental consultants. Our approach ensures that clients oil spill preparedness and environmental planning requirements are always satisfied.

Services include:

- Oil Spill Contingency Planning
- Environmental Audit
- Environmental Risk Assessment
- Contaminated Land Assessment
- Environmental Sensitivity Planning
- Coastal Protection Planning

### Accredited Training

Adler and Allan provide fit for purpose training solutions to meet our client's emergency pollution response requirements. We deliver courses in Marine and Inland Pollution Response.

All our courses comply with UK national standards.

Courses Include:

- MCA 1 – Oil Spill Response Sorbent Familiarisation
- MCA 2 – Oil Spill Response Equipment Familiarisation
- MCA 3 – Beachmaster Course – Shoreline Supervisor
- MCA 4 – On Scene Commander Course
- MCA 5 – Incident Controller – Senior Management Response
- Tailored – Sorbent Familiarisation
- Tailored – Environmental Awareness

### Waste Management

Adler and Allan has a comprehensive tanker fleet to manage all types of hazardous waste removal projects.

Our DISAB High Flow Vacuum Tanker is hugely versatile in both wet and dry applications, and can remotely collect oils/solids and sludges over distances in excess of 50metres with its wide suction line. Waste can then be collated and disposed of in house.

We have ISO9001 Quality Assurance, ISO 14001 Environmental Management Systems accreditations and waste handling capability to ensure your paperwork is fully compliant.
